

CONDUCTIVE POLYMER ALUMINUM SOLID CAPACITOR

Application Guidelines

1. Polarity

CS-CAP is solid aluminum electrolytic capacitors with positive and negative electrodes. Do not reverse the polarity when using. If it is used with the polarities reversed, its life may shorten because of increasing leakage current or short circuit.

2. Prohibited circuits

Since problems can be expected due to leakage current increasing during soldering and other processes, CS-CAP cannot be used in the following circuits:

- (1) High impedance circuits
- (2) Coupling circuits
- (3) Time constant circuits
- (4) Connection of two or more capacitors in series for higher withstand voltage
- (5) Circuits to get bad influence by big leakage current

* In addition to the leakage current fluctuation above, the operational conditions such as characteristics at high and low temperature, damp heat and endurance stipulated in the specifications will affect the capacitance. The fluctuation of the capacitance may cause problem if it is used as a time constant capacitor, which is extremely sensitive to the fluctuation of the capacitance. Do not use it as a time constant capacitor. Additionally, please contact Taiwan Chinsan Electronic Industrial Co., Ltd. for usage of two or more CS-CAP in series for voltage proof.

3. Over voltage

Over voltage exceeding the rated voltage may not be applied even for an instant as it may cause a short circuit.

4. Sudden charge and discharge

Sudden charge and discharge restricted (for maintenance of high-proof reliability). A protection circuit is recommended for when a sudden charge or discharge causes excessive rush current because this is a main cause of short circuits and large leakage current. Use protection circuits if the rush current exceeds 10A. The rush current exceeds 10×the maximum allowable ripple current of CS-CAP. Be sure to insert a protection resistor of about 1kΩ for charge and discharge when measuring the leakage current.

5. Soldering

The soldering conditions are to be within the range prescribed in the specifications. If the specifications are not followed, there is the possibility of the appearance becoming defective and of increase of abnormal leakage current and capacity reduction when soldering is conducted under conditions that are harsher than those stipulated.

Sufficient PCB installation space(PCB means Printed Circuit Board after this.) Sealing resin of CS-CAP may have a bulge. The design must give consideration to the standard of height and lead position displacement given in the specifications.

6. Use of CS-CAP for industrial equipments

To ensure reliability when the CS-CAP is used in industrial equipments, design must allow for its capacitance, impedance and other characteristics.

7. Use of CS-CAP for human life equipments

In case of using in equipments regarding human life (e.g. Space equipment, aeronautic equipment and atomic equipment etc.), be sure to talk over the matter with Taiwan Chinsan Electronic Industrial Co., Ltd. Don't use without recognition document of Taiwan Chinsan Electronic Industrial Co., Ltd.

CONDUCTIVE POLYMER ALUMINUM SOLID CAPACITORS

8. Storage

- (1) Store CS-CAP with the temperature range between 15 to 35 °C and the relative humidity of 75% or less without direct sunshine and store CS-CAP in the package states if possible.
- (2) CS-CAP are recommended that you shall open the bag just before use and CS-CAP shall be used up.
- (3) Never store CS-CAP in which it is directly exposed to water, brine, oil or in condensation status.
- (4) Never store CS-CAP in any area filled with poisonous gases(including hydrogen sulfide, sulfurous acid, nitrous acid, chlorine and ammonia).
- (5) Never store CS-CAP in any area to which ultraviolet and/or radial rays are radiated.

9. Cleaning

Concerning about HCFC, higher alcohol system, petroleum system, terrene system, water system with surface active agent and other solvents the washing way (separateness or combinations) by soak, ultrasonic wave, boil, vapor etc. is confirmed under the maker's recommendation. Please contact us if you require further details.

10. Notes on circuit designs for CS-CAP

10.1 Performance

Use CS-CAP within the rating and performance ranges defined in this specifications.

10.2 Operating temperature and ripple current

If CS-CAP is used at a temperature higher than the upper category temperature, or excess ripple current flows through CS-CAP, there are high possibilities of life cycle reduction or leakage current increasing to cause CS-CAP defective.

10.3 Leakage current

The leakage current of CS-CAP may increase slightly by soldering conditions. The application of DC voltage enables the capacitors to be repaired by itself and this leads the leakage current to be smaller gradually.

10.4 Applied voltage

For the reliability of CS-CAP, it is recommended that the voltage applied to the peak value of the ripple voltage should be less than the rated voltage.

10.5 Failure mode

CS-CAP contains a conductive polymer. The life ends mostly due to random failure mode, mainly short circuit. In case of short circuit, CS-CAP can be overheated by continuous current flow, the case of CS-CAP would be removed by internal pressure increasing.

10.6 Insulation

Plastic coated case of CS-CAP can't guarantee the insulation. Do not use CS-CAP in areas requiring insulation.

CONDUCTIVE POLYMER ALUMINUM SOLID CAPACITORS

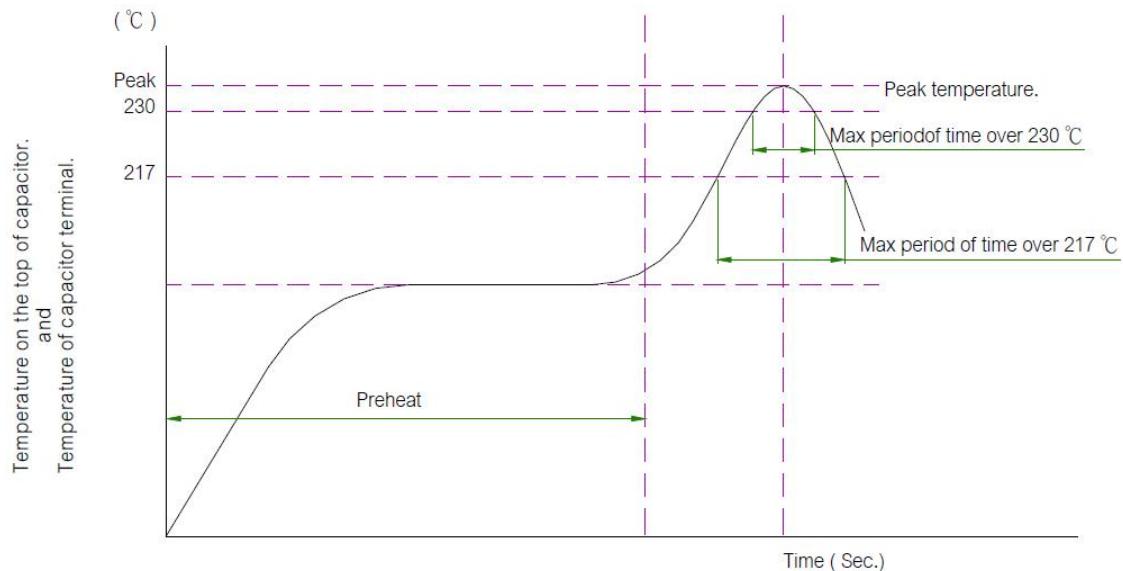

11. Soldering condition for CS-CAP

11.1 Wave soldering condition for DIP type

Wave soldering	Temperature	Time
Preheat	125°C Max	Within 120 sec
Soldering condition	260+5°C Max	Within 10 sec

11.2 Reflow soldering condition for SMD type

Preheat	Time maintained above 217°C	Time maintained above 230°C	Peak Temp	Reflow times
150°C~180°C 120 sec Max	50 sec Max	40 sec Max	260°C MAX 250°C MAX	1 cycle only 2 cycle allowed

12. Catalogs

Specifications in the catalogs are subject to change without notice. The data shown in the catalogs are not assured as the whole performance values, but typical values.

For more details, refer to JEITA RCR-2367C (March 2019) with the title "Safety Application Guide for fixed aluminum electrolytic capacitors for use in electronic equipment".

CONDUCTIVE POLYMER ALUMINUM SOLID CAPACITORS

Capacitor Series Table

Series	Page	Features	Voltage Range (Vdc)	Capacitance Range (μ F)	Operating Temperature Range (°C)	Endurance (Hours)
DIP	UPS	10 Super Low ESR 7 mΩ and Large Capacitance	2.5 to 16	150 to 2,000	-55 to 105°C	2,000
	UPR	12 Super Low ESR 8 mΩ and Small size	2.5 to 16	100 to 820	-55 to 105°C	2,000
	UL	14 Small size, Low profile and Low ESR	2.5 to 16	100 to 680	-55 to 105°C	2,000
	UPE	16 Super Low ESR Endurance 105°C 5,000 hours	2.5 to 35	22 to 1,000	-55 to 105°C	5,000
	RP	18 ESR 12 mΩ	2.5 to 16	100 to 2,700	-55 to 105°C	2,000
	RH	20 Higher heat resistance 125°C High reliability	2.5 to 25	82 to 1,200	-55 to 125°C	2,000
	GP	22 Low ESR and High voltage	10 to 25	47 to 1,000	-55 to 105°C	2,000
	GV	24 High reliability and High voltage	25 to 100	18 to 470	-55 to 105°C	2,000
	GS	26 Low ESR and Large Capacitance	16 to 25	470 to 2,700	-55 to 105°C	2,000
NEW	UPC	28 Super Low ESR and High Ripple Current	6.3 to 22	180 to 1,000	-55 to 105°C	2,000

CONDUCTIVE POLYMER ALUMINUM SOLID CAPACITORS

UPR Series

- Super low ESR at a high frequency range
 - High ripple current capability
 - 2,000 hours at 105°C

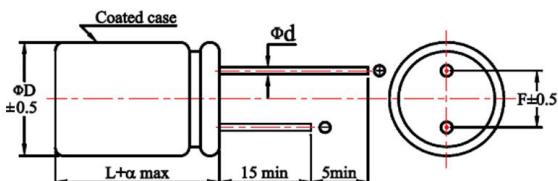

◆ SPECIFICATIONS

SPECIFICATIONS		Performance Characteristics
Item		
Category Temperature Range		-55 ~ +105°C
Working Voltage Range		2.5 ~ 16Vdc
Surge Voltage		Rated Voltage x1.15
Capacitance Tolerance		M: ±20% (at 25°C and 120Hz)
ESR		See the standard ratings table (at 25°C, 100~300KHz)
Dissipation Factor (Tanδ)		See the standard ratings table (at 25°C, 120Hz)
Leakage Current ≈ 1		See the standard ratings table (Impress the rated voltage for 2 minutes)
Low Temperature Characteristics Impedance Ratio		Z(-25°C)/Z(+25°C) ≤ 1.15 at 100KHz Z(-55°C)/Z(+25°C) ≤ 1.25 at 100KHz
Endurance	The following specifications shall be satisfied when the capacitors are restored to 25°C after subjected to DC voltage with the rated ripple current is applied for 2,000 hours at 105°C	
	Capacitance change	≤ ±20% of the initial value
	ESR	≤ 150% of the specified value
	Dissipation factor(tanδ)	≤ 150% of the specified value
	Leakage current	≤ specified value
Damp Heat (Steady State)	The following requirements shall be satisfied when the capacitor are restored to 25°C after exposing them for 1,000 hours at 60°C 90 to 95% RH	
	Capacitance change	≤ ±20% of the initial value
	ESR	≤ 150% of the specified value
	Dissipation factor(tanδ)	≤ 150% of the specified value
	Leakage current	≤ specified value

*1 In case of some problems for measured values, measure after applying rated voltage for 120 minutes at 105°C

*2 ESR should be measured at both of the terminal ends closest to the capacitor body.

◆ PART NUMBER SYSTEM

The diagram illustrates the timing sequence for a memory write operation. It features a horizontal timeline at the bottom with various signal traces originating from specific points in time.

- Address:** A vertical line labeled "Address" starts at the beginning of the timeline and extends upwards, representing the address bus.
- Control:** A vertical line labeled "Control" starts at the beginning of the timeline and extends upwards, representing control signals.
- Data:** A vertical line labeled "Data" starts at the beginning of the timeline and extends upwards, representing the data bus.
- Write Enable:** A vertical line labeled "WE" starts at the beginning of the timeline and extends upwards, representing the write enable signal.
- Row Address:** A horizontal line labeled "Row Address" starts at the beginning of the timeline and extends to the right, representing the row address.
- Column Address:** A horizontal line labeled "Column Address" starts at the beginning of the timeline and extends to the right, representing the column address.
- Special Request:** A horizontal line labeled "Special Request" starts at the end of the address phase and continues to the right, representing a special request signal.
- Size Code:** A horizontal line labeled "Size Code" starts at the end of the address phase and continues to the right, representing a size code.
- Lead Length Code:** A horizontal line labeled "Lead Length Code" starts at the end of the address phase and continues to the right, representing a lead length code.
- Lead Forming Type Code:** A horizontal line labeled "Lead Forming Type Code" starts at the end of the address phase and continues to the right, representing a lead forming type code.
- Capacitance Tolerance Code:** A horizontal line labeled "Capacitance Tolerance Code" starts at the end of the address phase and continues to the right, representing a capacitance tolerance code.
- Capacitance Code:** A horizontal line labeled "Capacitance Code" starts at the end of the address phase and continues to the right, representing a capacitance code.
- Voltage Code:** A horizontal line labeled "Voltage Code" starts at the end of the address phase and continues to the right, representing a voltage code.
- Series Code:** A horizontal line labeled "Series Code" starts at the end of the address phase and continues to the right, representing a series code.

The diagram shows the timing relationships between these signals, indicating when each signal is asserted or deasserted relative to the start of the address phase and the end of the address phase.

CONDUCTIVE POLYMER ALUMINUM SOLID CAPACITORS

RH Series

- Low ESR at a high frequency range
 - High ripple current capability
 - 2,000 hours at 125°C

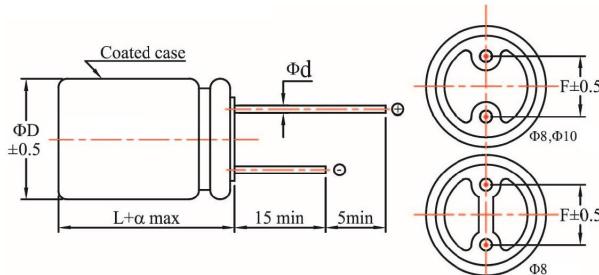

◆ SPECIFICATIONS

SPECIFICATIONS		Performance Characteristics
Item		
Category Temperature Range		-55 ~ +125°C
Working Voltage Range		2.5 ~ 25Vdc
Surge Voltage		Rated Voltage x1.15
Capacitance Tolerance		M: ±20% (at 25°C and 120Hz)
ESR		See the standard ratings table (at 25°C, 100~300KHz)
Dissipation Factor (Tanδ)		See the standard ratings table (at 25°C, 120Hz)
Leakage Current ≈ 1		See the standard ratings table (Impress the rated voltage for 2 minutes)
Low Temperature Characteristics Impedance Ratio		Z(-25°C)/Z(+25°C) ≤ 1.15 at 100KHz Z(-55°C)/Z(+25°C) ≤ 1.25 at 100KHz
Endurance	The following specifications shall be satisfied when the capacitors are restored to 25°C after subjected to DC voltage with the rated ripple current is applied for 2,000 hours at 125°C	
	Capacitance change	≤ ±20% of the initial value
	ESR	≤ 150% of the specified value
	Dissipation factor(tanδ)	≤ 150% of the specified value
	Leakage current	≤ specified value
Damp Heat (Steady State)	The following requirements shall be satisfied when the capacitor are restored to 25°C after exposing them for 1,000 hours at 60°C 90 to 95% RH	
	Capacitance change	≤ ±20% of the initial value
	ESR	≤ 150% of the specified value
	Dissipation factor(tanδ)	≤ 150% of the specified value
	Leakage current	≤ specified value

*1 In case of some problems for measured values, measure after applying rated voltage for 120 minutes at 105°C

※2 ESR should be measured at both of the terminal ends closest to the capacitor body

CONDUCTIVE POLYMER ALUMINUM SOLID CAPACITORS

GS Series

- Low ESR at a high frequency range
 - High ripple current capability
 - Large capacitance, size 8x16~10x20
 - 2,000 hours at 105°C

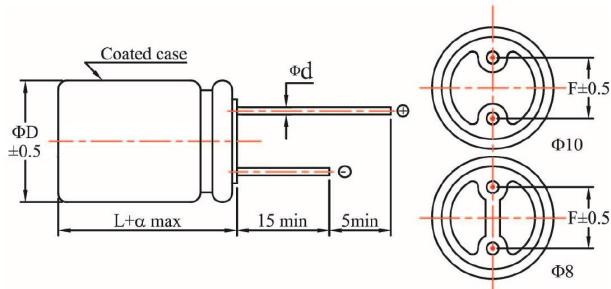

◆ SPECIFICATIONS

Item	Performance Characteristics								
Category Temperature Range	-55 ~ +105°C								
Working Voltage Range	16 ~ 25Vdc								
Surge Voltage	Rated Voltage x1.15								
Capacitance Tolerance	M: ±20% (at 25°C and 120Hz)								
ESR	See the standard ratings table (at 25°C, 100~300KHz)								
Dissipation Factor (Tanδ)	See the standard ratings table (at 25°C, 120Hz)								
Leakage Current ≈ 1	See the standard ratings table (Impress the rated voltage for 2 minutes)								
Low Temperature Characteristics Impedance Ratio	$Z(-25^\circ\text{C})/Z(+25^\circ\text{C}) \leq 1.15$ at 100KHz $Z(-55^\circ\text{C})/Z(+25^\circ\text{C}) \leq 1.25$ at 100KHz								
Endurance	<p>The following specifications shall be satisfied when the capacitors are restored to 25°C after subjected to DC voltage with the rated ripple current is applied for 2,000 hours at 105°C</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="padding: 5px; width: 45%;">Capacitance change</td><td style="padding: 5px;">≤ ±20% of the initial value</td></tr> <tr> <td style="padding: 5px;">ESR</td><td style="padding: 5px;">≤ 150% of the specified value</td></tr> <tr> <td style="padding: 5px;">Dissipation factor(tanδ)</td><td style="padding: 5px;">≤ 150% of the specified value</td></tr> <tr> <td style="padding: 5px;">Leakage current</td><td style="padding: 5px;">≤ specified value</td></tr> </table>	Capacitance change	≤ ±20% of the initial value	ESR	≤ 150% of the specified value	Dissipation factor(tanδ)	≤ 150% of the specified value	Leakage current	≤ specified value
Capacitance change	≤ ±20% of the initial value								
ESR	≤ 150% of the specified value								
Dissipation factor(tanδ)	≤ 150% of the specified value								
Leakage current	≤ specified value								
Damp Heat (Steady State)	<p>The following requirements shall be satisfied when the capacitor are restored to 25°C after exposing them for 1,000 hours at 60°C 90 to 95% RH</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="padding: 5px; width: 45%;">Capacitance change</td><td style="padding: 5px;">≤ ±20% of the initial value</td></tr> <tr> <td style="padding: 5px;">ESR</td><td style="padding: 5px;">≤ 150% of the specified value</td></tr> <tr> <td style="padding: 5px;">Dissipation factor(tanδ)</td><td style="padding: 5px;">≤ 150% of the specified value</td></tr> <tr> <td style="padding: 5px;">Leakage current</td><td style="padding: 5px;">≤ specified value</td></tr> </table>	Capacitance change	≤ ±20% of the initial value	ESR	≤ 150% of the specified value	Dissipation factor(tanδ)	≤ 150% of the specified value	Leakage current	≤ specified value
Capacitance change	≤ ±20% of the initial value								
ESR	≤ 150% of the specified value								
Dissipation factor(tanδ)	≤ 150% of the specified value								
Leakage current	≤ specified value								

※1 In case of some problems for measured values, measure after applying rated voltage for 120 minutes at 105°C

※2 ESR should be measured at both of the terminal ends closest to the capacitor body

CONDUCTIVE POLYMER ALUMINUM SOLID CAPACITORS

SU Series

- Ultra low ESR at a high frequency range
 - High ripple current capability
 - 2,000 hours at 105°C

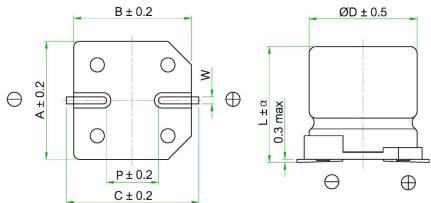

◆ SPECIFICATIONS

Item	Performance Characteristics								
Category Temperature Range	-55 ~ +105°C								
Working Voltage Range	2.5 ~ 6.3Vdc								
Surge Voltage	Rated Voltage x1.15								
Capacitance Tolerance	M: ±20% (at 25°C and 120Hz)								
ESR	See the standard ratings table (at 25°C, 100~300KHz)								
Dissipation Factor (Tanδ)	See the standard ratings table (at 25°C, 120Hz)								
Leakage Current ≈ 1	See the standard ratings table (Impress the rated voltage for 2 minutes)								
Low Temperature Characteristics Impedance Ratio	Z(-25°C)/Z(+25°C) ≤ 1.15 at 100KHz Z(-55°C)/Z(+25°C) ≤ 1.25 at 100KHz								
Endurance	The following specifications shall be satisfied when the capacitors are restored to 25°C after subjected to DC voltage with the rated ripple current is applied for 2,000 hours at 105°C <table border="1" data-bbox="479 851 1068 978"> <tr> <td>Capacitance change</td><td>≤ ±20% of the initial value</td></tr> <tr> <td>ESR</td><td>≤ 150% of the specified value</td></tr> <tr> <td>Dissipation factor(tanδ)</td><td>≤ 150% of the specified value</td></tr> <tr> <td>Leakage current</td><td>≤ specified value</td></tr> </table>	Capacitance change	≤ ±20% of the initial value	ESR	≤ 150% of the specified value	Dissipation factor(tanδ)	≤ 150% of the specified value	Leakage current	≤ specified value
